

## ELEVATOR CLADDING

### ELEVATOR CLADDING

Metal Cladding is a major part of the escalator that is used for these purposes Preventing access to moving parts inside the escalator, improving the appearance and making the entire design of the escalator more attractive. Mostly Cladding is used in public-transit escalators and It is largely made of stainless steel with variety of Decorative Design & Finish Options.

## OUR ELEVATOR & LIFT CLADDING SOLUTIONS

Our Lift Cladding Dubai solutions provide comprehensive options that unite attractive appearance with long service life together with practical benefits:

- Stainless Steel Elevator Panels: Scratch-resistant, fire-resistant, and corrosion-proof panels for modern lift interiors.
- The automotive industry uses reflective mirror finish cladding to elaborate modern elevator interiors with luxurious high-gloss reflections.
- The decorative metal Lift Cladding ultimate allows clients to create special metal finishes combined with textures and designs suitable for every type of architecture.
- A durable and sleek design of panels serves escalators to present an organized modern appearance.
- Stainless steel cladding on elevators provides simultaneously protective design elements and elegant door appearance.
